

Linux LAB-1

Que - 6

Question 6 - > Generate a system/directory report using find, du, df, stat, wc, sort, head, tail, uname, hostname, history, free, ps, top with screenshots and summary.

Answer :

User and Group Management

Linux provides commands for creating and managing users and groups. `groupadd` creates a new group, while `useradd` creates a new user account. `passwd` is used to set or change a user's password and `usermod` modifies an existing user's group membership or information. The `id` and `groups` commands display user and group information, while `whoami` displays the current logged-in username. `userdel` and `groupdel` are used to remove users and groups. **Result**

A user and group were successfully created, configured, verified using `id`, `groups` and `whoami`, and the test user was removed after completing the demonstration.

```
Ubuntu
shuaib@mshuaibsi:/$ sudo groupadd devteam
[sudo: authenticate] Password:
shuaib@mshuaibsi:/$ sudo useradd -m -g devteam testuser1
shuaib@mshuaibsi:/$ sudo passwd testuser1
New password:
Retype new password:
passwd: password updated successfully
shuaib@mshuaibsi:/$ sudo usermod -aG sudo testuser1
shuaib@mshuaibsi:/$ id testuser1
uid=1001(testuser1) gid=1001(devteam) groups=1001(devteam),27(sudo)
shuaib@mshuaibsi:/$ groups testuser1
testuser1 : devteam sudo
shuaib@mshuaibsi:/$ whoiam
whoiam: command not found
shuaib@mshuaibsi:/$ whoami
shuaib
shuaib@mshuaibsi:/$ su - testuser1
Password:
